

# Are you getting big performance without vibration?

You'll notice that the bike above is vibrating madly, while the one below is rock-steady.

The reason?

The steady bike is a Norton Commando. That means it has 'Isolastic' construction. Engine and transmission are separated from the frame by unique rubber mounts.

Think what that means on a run:

Your teeth won't chatter. You won't get so fatigued. You'll arrive as fresh as you started out.

But the biggest advantage of 'Isolastic' construction

is that it allows us to give you the sort of performance and style you'd expect only from Norton—motorcycle craftsmen for sixty years.

You get easy maintenance on a jet-smooth bike that goes like a jet:

0-60 in 4.8. Standing quarters in 12.8. Way past 120 m.p.h. in standard trim.

Compare the smoothness of your present bike to the Norton Commando Super bike at your nearest Norton dealer now.
